

# Folder structure for product-driven-pipeline

Product driven pipeline has multiple organizations such as Sql, Windows, Linux, and Common services. Each organization has multiple repo's with different services like ad-service, ddi-service, storage, network and etc. and each product has its own repo's like eg: chef has chef-main repo, chef-cookbook1 reop, chef-cookbook2 repo etc..., similarly for vRA, vRO, habitat, etc...,
